AXIS W120 Body Worn Camera

Livestream, locate, and support – your way

From the leader in network video solutions

AXIS COMMUNICATIONS

Always on

With built-in LTE/4G, AXIS W120 Body Worn Camera advances operational awareness with video streaming and continual location tracking. It also plugs directly into the system of your choice. So you can manage video – your way. Its cybersecurity provisions are second to none. And AXIS W120 is always on. Just like your team!

Protect your staff

AXIS W120 offers live streaming and location tracking via built-in LTE/4G, so you can always use AXIS Body Worn Live to connect. At the click of a button, you can stream from your vantage point with audio featuring advanced noise and wind suppression. And because AXIS W120 buffers for up to 120 seconds, you'll be sure to catch the whole encounter. It has stealth mode for surreptitious recording. To keep up with you throughout the day, the AXIS W120 is robust and waterproof and offers up to 15 hours of battery life. You can charge on the go with any USB-C charger, and offloading is fast. So it's ready to go when you are, and a snap to put away.

- Always-on streaming
- Manage video your way
- Sharp audio and video
- Unparalleled cybersecurity

A part of your – scalable – system

Like all our products, AXIS W120 is built on true open architecture for maximum flexibility and seamless integration. All you need is the Axis body-worn hardware and the video or evidence management system of your choice. Nothing else. In other words, you choose the software that works best for you. You can use AXIS W120 with a complete end-to-end solution from Axis, including AXIS Camera Station VMS, or a third-party system, either on-site or in the cloud. Plus, the cost-efficient docking stations and separate system controller make it easy to scale up whenever you need. So, you decide how and where you want to manage your video evidence – while protecting the value of your existing investments.

The secure – wearable – choice

AXIS W120 features cybersecurity provisions that are second to none. Axis Edge Vault, our hardware-based cybersecurity platform, safeguards the device and protects sensitive information from unauthorized access. Data at rest and in transfer is encrypted with AES 256 and HTTP with TLS respectively. And only authorized software works, thanks to secure boot. AXIS W120 also uses CJIS-approved AES 256-bit encryption via its internal hardware and lives up to official FBI standards for cybersecurity. On top of all that, for live streaming, you get full end-to-end XChaCha20-Poly1305 encryption.
